

Your Streetlights Are Erasing the Night Sky

There's software that can fix this. And you can make it happen.

The Problem

- Night sky brightness is increasing by nearly 10% every year
- Nearly 80% of North Americans can no longer see the Milky Way
- Street lighting is one of the largest sources of urban skyglow
- Every street is lit for worst-case conditions, all night, creating substantial unnecessary overlighting

The Fix

- Photometrics AI optimizes every streetlight individually
- Software-only — works with existing networked lighting
- Strategic late-night and early-morning dimming where safe
- 35% energy reduction while meeting IES safety standards
- Automatic bird migration protection via Cornell BirdCast

You Can Do Something About This — Right Now

Our free tool finds your local officials and helps you write a personalized letter asking them to evaluate intelligent street lighting for your community.
